

Sounds from the Stone Age

Desire Direct

Desire Direct is doing research in the ecology of soil and advocates for a reinjection of the biological paradigm into art & poetry. Physical and psychological experiments are conceptualized to proceed at a reasonable base level, that holds the wealth of abandoned, dense materials and gives way to the inner vision of the psychic.

Documentation about the work-in-progress can be found [here](#). Please do have a look at the prequel [The VteX Files](#) of a piece that will follow.
